

Woodbury Plan of Conservation and Development Update Woodbury, Connecticut

Description

FHI assisted in updating Woodbury's Plan of Conservation and Development for two elements. For the Water Resources element, FHI 1) evaluated land uses located over the primary aquifer recharge zone in Woodbury, 2) identified issues with zoning, land use, and groundwater quality, and 3) drafted recommendations for zoning modifications, future land use management, and best practices. For the Traffic & Circulation element, FHI reviewed traffic and pedestrian circulation along Main Street in the center of Woodbury and evaluated traffic calming strategies through the project area, providing recommendations for improvements on both issues.

Client

Town of Woodbury, Connecticut
