

## Statewide Bicycle Route Inventory Virginia Department of Transportation

---

### Description

FHI was assigned to perform a statewide inventory of existing interstate bike routes to determine any issues affecting travel along these routes. Specifically, the routes were analyzed for a number of operational criteria including: pavement width and configuration, traffic volumes, turning issues, signage and pavement markings, and potential land use issues or conflicts. These analyses were performed on over 800 miles of bikeway that make up the Route 1 and TransAmerica interstate bike routes. The final report recommended changes for improved bicyclist safety on these routes.
