

## Logan International Airport Terminal Historical Documentation Boston, Massachusetts

---

### Description

Delta Airlines' expansion plans for Logan International Airport in Boston called for the removal of Terminal A, the former Eastern Airlines Terminal designed by Minoru Yamasaki in the early 1970s. Although less than 50 years old, some thought that the building's association with Yamasaki warranted consideration of landmark status. FHI produced a report documenting the building's lack of historical importance. Subsequently, FHI produced a state-level mitigation document that included large format photography and a description and history of the building.
