

## Tweed-New Haven Regional Airport Master Plan Update New Haven and East Haven, Connecticut

---

### **Description**

FHI was part of a project team that conducted the 2002 Master Plan Update for Tweed New Haven Airport in Connecticut. FHI compiled existing environmental data and evaluated potential impacts and regulatory constraints to master plan alternatives posed by natural and cultural resources, including historic resources, Section 303(c) resources, coastal resources, tidal wetlands, floodplains, and water quality. FHI also evaluated existing and future traffic conditions on local roadways associated with vehicular access to the airport. During the planning process, FHI was intimately involved in presenting and discussing project issues with a technical advisory committee comprised of agency representatives and local citizens.
