

Vermont Statewide Freight Study State of Vermont

Description

FHI was selected as part of a team to undertake a statewide analysis of freight movement and freight routes in Vermont. Under contract to the Vermont Agency of Transportation, the team assessed the patterns of existing freight movement and developed alternative strategies for dealing with the movement of freight in the state in the future. The outcome of the study helped form a statewide policy plan in addition to technical strategies for freight movement throughout the state. Considerations included modal distribution of freight movement as well as identification of primary commodities.
