

## Northern Virginia Bicycle and Trail Network Plan Virginia Department of Transportation

---

### **Description**

FHI was selected as part of a team tasked with identifying needed regional bicycle network improvements as part of an effort by the Virginia DOT to improve travel opportunities for this mode. FHI's roles included coordinating with local planning officials during assembly of GIS data, soliciting input from citizens during regular public involvement sessions to identify gaps in the existing bicycle network and potential improvements, and assessing existing roadway corridors for their accommodation of bicycle travel. FHI also established a website for dissemination of project information to the public. The study findings will enable VDOT to establish a priority list of improvements to assist in allocating limited funding resources to areas of greatest need throughout the region.
