

## Burlington Downtown Parking Study Burlington, Vermont

---

### Description

FHI participated with a large international engineering firm in the conduct of a parking study for downtown Burlington. The study included reviewing the existing usage of three specific lots, providing a programmatic review of parking issues, identifying deficiencies in the system, reviewing the residential parking program, providing a database of the parking system, including parking by type, and recommending effective parking management strategies that support transit use and economic development. FHI's role in this study was data collection.
