

Stamford Transportation Center Multimodal Service Study Stamford, Connecticut

Description

FHI is currently working on an assessment of pedestrian and vehicular circulation and connections around the Stamford Downtown Transportation Center. FHI is leading a project team to develop alternative designs to improve pedestrian linkages between the Transportation Center and the central business district. FHI will conduct a user survey at the Transportation Center to determine the appropriate linkages between the Center and neighboring businesses. The study will also examine vehicle circulation patterns and suggest alternatives to increase pedestrian and vehicular safety in the vicinity of the Transportation Center. The study will also identify funding opportunities to implement suggested alternatives.

Client

City of Stamford
