

## Eastern Connecticut State University Improvements Willimantic, Connecticut

---

Artist's rendering by ADD, Inc.

### Description

Under an on-call environmental services agreement with the Connecticut Department of Public Works (DPW), FHI was tasked with review of Eastern Connecticut State University (ECSU) Master Plan project changes, their potential for significant environmental impacts, and the potential need for updates to the completed Finding of No Significant Impact (FONSI) for the Master Plan Project changes arose during the Master Plan design-build process and included two new dormitory buildings, demolition of two existing low-rise dormitories, and an increase in square footage of the New Science Building. FHI reviewed the conceptual changes for environmental impacts for all resources pursuant to the Connecticut Environmental Policy Act (CEPA), determining that no significant impacts would result from the changes and that impacts were similar to what was reported in the completed FONSI. FHI prepared a summary letter of findings to the DPW for their use in coordinating with the Office of Policy and Management (OPM) relative to CEPA compliance.
