

Western Connecticut State University Parking Garage Danbury, Connecticut

Description

As an assignment under our On-Call Environmental Documentation Contract with the Connecticut Department of Public Works (DPW), FHI was asked to provide a peer review of the Environmental Impact Evaluation (EIE) for a new parking garage at the Western Connecticut State University, Midtown Campus, in Danbury, Connecticut. The project was to develop a new parking garage for 725 cars, including limited surface parking, courtyards, walkways, and landscaping. FHI provided review of the content, logic, and presentation of the EIE with the purpose of ensuring that the document fulfilled the requirements of the Connecticut Environmental Policy Act (CEPA), including addressing the issues raised by the public scoping process, the required impact analyses, and suitable mitigation measures.
