

## Binghamton Intermodal Study Binghamton, New York

---

### Description

As part of an Architect-Engineering firm's project team, FHI was selected by Broome County to perform Environmental Assessment/SEQR documentation for an intermodal transportation center in Binghamton, New York. The process involved conducting public scoping meetings to ascertain key project issues and resource concerns, followed by in-depth data collection and analyses to document the project's impact on the social, cultural, and natural environment. FHI reviewed alternative sites and facility design programs, coordinated extensively with the Federal Transit Administration (FTA) and various county agencies, and communicated project status and potential impacts to the public at informational meetings.
