

# South Windsor Traffic Calming South Windsor, Connecticut

## Description

For the Town of South Windsor, FHI conducted a neighborhood traffic calming study for Kelly Road. Kelly Road is heavily used by through traffic headed to I-84 in Vernon resulting in high traffic volume, high speed, and safety concerns by residents. FHI conducted a series of three neighborhood workshops to introduce the concept of traffic calming and work with the community to help them develop their own traffic calming plan for Kelly Road. Elements of the plan included raised intersections, speed humps, roadway narrowing, curbing, sidewalks, signage, gateways and a possible roundabout. FHI continues to work with the Town of South Windsor to conceptually design the roundabout and seek funding through the regional planning agency. Follow up town council presentations are anticipated.
