

## MBTA Worcester Commuter Rail Line Worcester, Massachusetts

---

### Description

FHI is leading the public involvement process and assessing cultural resources for a study to determine the effects of triple tracking portions of the MBTA's Worcester Commuter Rail line. In addition to the potential triple track portions, a component of the study addresses the feasibility of a new commuter rail station to serve Framingham State College. For the public involvement aspects of the job, FHI staff has identified stakeholders and is working with the public to determine the critical issues associated with this project. For the cultural resources component, FHI staff is working with state and national databases to determine protected properties within the study area.
