

Expert Testimony - Lyme Sand and Gravel Lyme, Connecticut

Description

FHI was retained to research and evaluate the potential community, environmental, and natural resource impacts of an application for a Special Exception Application by a sand and gravel operation in Lyme, Connecticut. FHI prepared expert testimony regarding potential planning and natural resource ramifications of the application, to be delivered to the Lyme Planning and Zoning Commission, on behalf of a local non-profit environmental preservation organization. The proposed activity would have been an intensive use of land with far reaching implications for long term planning, preservation of community character, and environmental and natural resource areas. FHI's testimony focused on these planning issues and quality-of-life aspects of the application.
