

Roundabout Permitting East Barre, Vermont

Description

To improve traffic safety at the intersection of U.S. Route 302 and VT Route 110 in East Barre, Vermont, the Vermont Agency of Transportation (VTRans) proposed this high-accident intersection to be converted to a roundabout. The roundabout will eliminate several existing safety hazards at the intersection, such as poor sight lines. East Barre is a small, rural community located in Central Vermont. The Route 302/110 intersection is located in the center of town and serves as the focal point for the small village center.

To enable the proposed project to move forward, Fitzgerald & Halliday, Inc. (FHI) was tasked with preparing several environmental permit applications including wetlands (a conditional use determination) and stormwater permits (both a general permit and a construction-related permit).
