

## Niantic River Watershed Study Connecticut

---

### **Description**

Fitzgerald & Halliday, Inc. (FHI) was part of a consultant team assisting the Connecticut Department of Environmental Protection to develop a watershed protection plan for the Niantic River. The plan was undertaken to guide efforts to improve water quality throughout the basin and to set a foundation for future watershed protection.

FHI's role included identifying key natural resources and key watershed protection issues, evaluating the local framework for regulatory protection (wetland and zoning regulations), and recommending watershed management practices. FHI also assisted to develop a public outreach effort to promote plan adoption and foster support for the implementation of plan recommendations.
